(54) Title: APPARATUS AND METHOD FOR DISTRIBUTING SIGNALS

WO 2004/082280 A1

(57) Abstract: A server apparatus (20) is capable of distributing audio, video, and/or data signals in a household and/or business dwelling using the existing coaxial cable infrastructure. According to an exemplary embodiment, the server apparatus (20) includes a receiving element (21) operative to receive signals from a broadcast source. First processing elements (28, 29) generate first analog signals responsive to the received signals. Second processing elements (31-33) generate second analog signals responsive to the received signals. The first analog signals are provided to a first client device (50) via a coaxial cable connecting the server apparatus (20) and the first client device (50). The second analog signals are provided to a second client device (60) via the coaxial cable connecting the server apparatus (20) and the second client device (60).
